Tips for care

To enjoy your extensions for a long time and to guarantee a perfect look, you should stick to the following tips.

Brushing the Extensions

Brush the hair regularly. Go through your hair several times with an extension brush. Start at the tips and work your way up without leaving out the roots. Do not brush your hair when wet and tie it up at night.

Washing the Extensions

After application, the hair should not be washed for 24-48 hours. Use mild shampoos (gobella Shampoo) for washing. Use rich care products such as conditioners and cures, but do not apply them to the hairline. Products containing oil should not be used. When using silver shampoo, first try the effect on a small strand and dilute 1 to 3 if necessary.

Drying the Extensions

The hairline should always be blow-dried. Afterwards, squeeze the hair instead of rubbing it to protect your extensions. Avoid going to bed with wet hair.

Taking a bath

When bathing in salt or chlorine water, the hair should be put up, because the hair can become dry due to the chemicals/ salt. Sun creams can discolor blonde hair, so avoid contact if you wear light extensions.

You have further questions about the use or care of the extensions? You are looking for styling inspirations to put your new products in scene?

Attaching the Extensions

Gluing the extensions in

- Separate a thin hair section horizontally
- Do not use too many or too few hairs
- Remove protective foil from the extensions
- Glue the first adhesive strip from below
- Separate protruding hair
- Glue an adhesive strip from above against it
- Press both adhesive strips firmly

Positioning of the Extensions

- Start in the middle of the neck - enough distance to the hairline
- Do not start too far down - this way the hair can be pinned up better
- Divide next row and maintain distance to side contour
- In the further course, do not place the hairs accurately on top of each other, but in a checkerboard pattern
- Distance to ear and side contours of the hair is important for comfort and inconspicuous placement

General Tips for Usage

Please use fingers for attachment - no comb or straightening iron. Hair must be applied without pulling in the direction of growth. Before inserting, clean your own hair and make sure that the hair roots are free of styling products.

Removal and Reuse

Removing the Extensions

- Slightly loosen the sandwich at the edge
- Spray gobella Tape Extensions Remover into the open sandwich
- Carefully pull the sandwich slightly apart and spray it again
- Pull the sandwich completely apart
- Repeat the process for all extensions

Removing adhesive residues

Spray the hair with gobella Glue Ex and carefully comb out the adhesive residues with a fine-toothed comb.

Reusing the Extensions

- When the glue has dried a little, rub the old glue material from the stripe with your thumb
- The stripped stripes can be immediately covered with a new tape and are ready for use
- Clean the hair carefully before inserting the extensions and make sure that the roots are free of styling products (e.g. Conditioner)

Recommendation

The gobella care products were developed in close cooperation with over 50 extension experts and are optimally adapted to our extensions. Checkout our care sets to provide your extensions with the best care they can get.
